In response to my inquiry, Mr. Dunham called to discuss issues in this case, which boiled down to (1) is it inherent that silicone release agent produce critical water in oil emulsion? (2) Ex. 2 of Declaration of 10/4/04 is non-porous and completely contrary to clm 11, except clm 11 states the resultant film is porous. Mr Dunham argued the statement is the crucial difference, the Em rebutted obviously a critical aspect of the invention (e.g. order of mixing, etc) is omitted & must be present to be patentable. It was understood the water-in-oil emulsion is the template for the porosity in the porous resin layer. Mr. Dunham will request clarification from clients to overcome these issues, which is appreciated by the Examiner.
